Subject: RE: Question regarding the credit in the Excel spreadsheet

Yes, I'd appreciate you registering this as a technical comment. And yes I do believe that the 20 and 10 CF values are too low and that if you increase these numbers (in the 40 CF range anyways) the developers will opt for more plantings. I understand the logic for lowering it, but again the tree plantings have more benefits from air quality, to shade relief, the aesthetic and more.

I know that with the few conversations we've had with developers on upcoming projects we were explaining the value of proposed tree planting due to the credit that was floated out early. We've been revising concepts to provide more interior landscaping islands to allow for tree planting.

Thanks again for posting this and I hope the weather people got this weekend's weather right. I'm sick of the AC going all the time.

Be good.
